

# LUMI

## **What else?**

**A brief discussion about what else LUST offers, what is not covered in this course, and how you can learn about it.**

**Kurt Lust**

LUMI User Support Team (LUST)  
University of Antwerp

May 2024

# What did we not cover?

- For several topics, this course gave only a brief overview with many details omitted
- General topics not covered at all:
  - Guidelines for writing HPC-friendly code
  - Debugging and profiling tools
  - Developing (portable) code for GPU and optimising that code
- And it is not a very domain-specific course (well, the domain is “LUMI supercomputer” and not CFD or molecular dynamics or AI)

# LUST trainings

- Introductory training: Basically this training...
- 4-day comprehensive training oriented towards traditional HPC:
  - Mostly given by HPE and AMD experts
  - Covers also debugging and profiling tools, and a bit about writing HPC-friendly code
  - Some topics of this course covered in more depth
  - On-site recommended for contact with HPE and AMD experts
  - Next edition: Likely 28-31 October in The Netherlands
- AI on LUMI: Workshop-style training on AI
  - Under development
  - 1st edition: End of May in Copenhagen
  - On-site necessary for the full experience
- Building a more workshop-like course on debugging and profiling
  - Maybe bring-your-own code to experiment
  - On-site necessary for the full experience

# Other trainings

- PRACE coordination is no more, EuroHPC is starting up an effort
  - For now overview by CASTIEL: [www.eurocc-access.eu/services/training](http://www.eurocc-access.eu/services/training)
  - Courses about tools, about programming paradigms, ...
- AMD provides trainings in Europe from time to time
  - Latest edition was a [course for HLRS in April 2024](#)
  - Excellent materials from a [course at ENCCS](#), with [recordings on YouTube](#)
- LUMI consortium countries also organise courses from time to time
  - E.g., in January there was a GROMACS course at CSC in collaboration with [BioExcell](#) and the EuroHPC national competence centres of Finland and Sweden
  - Some of those courses are also announced on [the LUMI web site](#)

# Other LUST services

- Yearly “hackathon”: No specific theme, but for optimisation of your code with the help of experts from HPE, AMD and LUST
  - One week, so a clear goal is needed
  - Next one in 14-18 October in Brussels
- Porting call: When resources allow, we also launch a call for assistance in porting code
  - Assistance = you guarantee availability of people in the time window
  - Help from experts at HPE, AMD and LUST
  - Selection partly based on potential impact of the code
- Monthly virtual user coffee break
  - Usually last Wednesday of the month
  - Often with a short presentation
  - Experts from HPE and AMD also present

# LUMI web sites

- Main LUMI web site at [lumi-supercomputer.eu](https://lumi-supercomputer.eu)
  - Links to information on obtaining an allocation and to training events
- Documentation split in two:
  - [docs.lumi-supercomputer.eu](https://docs.lumi-supercomputer.eu): Everything except documentation that is very specific to a single package
  - [LUMI Software Library](https://lumi-supercomputer.github.io) at [lumi-supercomputer.github.io](https://lumi-supercomputer.github.io): Package-specific information for all software for which we have some support
- [LUMI training materials](https://lumi-supercomputer.github.io) at [lumi-supercomputer.github.io](https://lumi-supercomputer.github.io): Archive of past LUMI trainings and user coffee break presentations
  - Not all materials online, some only available on LUMI
- Some local organisations have documentation that is relevant to LUMI
  - We link to it if it is a real addition to our materials and we know about it

**The End...**
