Omnitrace: Application Profiling, Tracing, and Analysis

Refer to current documentation for recent updates

Installation (if required)

To use pre-built binaries, select the version that matches your operating system, ROCm version, etc.

Select OpenSuse operating system for HPE/AMD system: omnitrace-1.7.4-opensuse-15.4-ROCm-50400-PAPI-OMPT-Python3.sh

There are .rpm and .deb files for installation also. In future versions, binary installers for RHEL also available.

Full documentation: <u>https://amdresearch.github.io/omnitrace/</u>

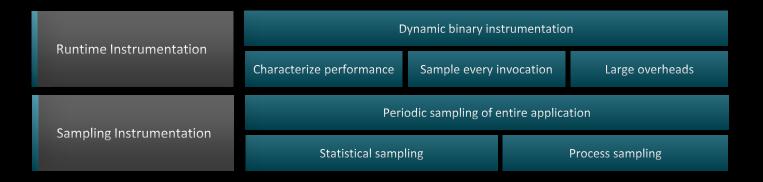

export OMNITRACE_VERSION=latest
export ROCM_VERSION=5.4.3
export OMNITRACE_INSTALL_DIR=</path/to/your/omnitrace/install>

python3 omnitrace-install.py -p \${OMNITRACE_INSTALL_DIR} --rocm \${ROCM_VERSION}</u>

Set up environment:
source \${OMNITRACE_INSTALL_DIR}/share/omnitrace/setup-env.sh

Note: If installing from source, remember to clone the omnitrace repo recursively

Omnitrace instrumentation Modes

Basic command-line syntax: \$ omnitrace [omnitrace-options] -- <CMD> <ARGS> For more information or help use -h/--help/? flags: \$ omnitrace -h Can also execute on systems using a job scheduler. For example, with SLURM, an interactive session can be used as: \$ srun [options] omnitrace [omnitrace-options] -- <CMD> <ARGS>

For problems, create an issue here: <u>https://github.com/AMDResearch/omnitrace/issues</u> Documentation: <u>https://amdresearch.github.io/omnitrace/</u>

Omnitrace Configuration

Commonly Used GPU Counters

VALUUtilization	The percentage of ALUs active in a wave. Low VALUUtilization is likely due to high divergence or a poorly sized grid
VALUBusy	The percentage of GPUTime vector ALU instructions are processed. Can be thought of as something like compute utilization
FetchSize	The total kilobytes fetched from global memory
WriteSize	The total kilobytes written to global memory

Python™

The omnitrace Python package is installed in /path/omnitrace_install/lib/pythonX.Y/site-packages/omnitrace

Setup the environment:

\$ export PYTHONPATH=/path/omnitrace/lib/python/sitepackages/:\${PYTHONPATH}

We use the Fibonacci example in omnitrace/examples/python/source.py

Execute the python program with:

\$ omnitrace-python ./external.py

Profiled data is dumped in output directory:

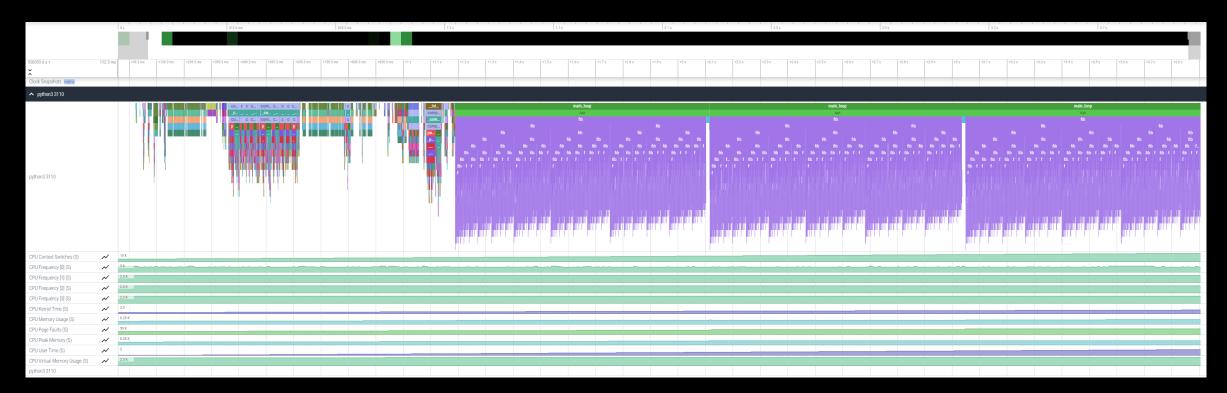

\$ cat omnitrace-source-output/timestamp/wall_clock.txt

Kokkos

Omnitrace can instrument Kokkos applications too.

Edit the \$HOME/.omnitrace.cfg file and enable omnitrace:

... OMNITRACE_USE_KOKKOSP = true

• • •

Profiling with omnitrace produces *kokkos*.txt files:

\$ cat kokkos_memory0.txt

Other Executables

• omnitrace-sample

- For sampling with low overhead, use omnitrace-sample
- Use omnitrace-sample --help to get relevant options
- Settings in the OmniTrace config file will be used by omnitrace-sample
- Example invocation to get a flat tracing profile on Host and Device (-PTHD), excluding all components (-E all) and including only rocm-smi, roctracer, rocprofiler and roctx components (-I ...)

```
mpirun -np 1 omnitrace-sample -PTHD -E all -I rocm-smi -I roctracer -I rocprofiler -I roctx -- ./Jacobi_hip -g 1 1
```

• omnitrace-causal

- Invokes causal profiling
- omnitrace-critical-trace
 - Post-processing tool for critical-trace data output by omnitrace

Current documentation: https://amdresearch.github.io/omnitrace/development.html#executables

Tips & Tricks

- My Perfetto timeline seems weird how can I check the clock skew?
 - Set OMNITRACE_VERBOSE=1 or higher for verbose mode and it will print the timestamp skew
- It takes too long to map rocm-smi samples to kernels.
 - Temporarily set OMNITRACE_USE_ROCM_SMI=OFF
- What is the best way to profile multi-process runs?
 - Use OmniTrace's binary rewrite (-o) option to instrument the binary first, run the instrumented binary with mpirun/srun
- If you are doing binary rewrite and you do not get information about kernels, set:
 - HSA_TOOLS_LIB=libomnitrace.so in the env. and set OMNITRACE_USE_ROCTRACER=ON in the cfg file
- My HIP application hangs in different points, what do I do?
 - Try to set HSA_ENABLE_INTERRUPT=0 in the environment, this changes how HIP runtime is notified when GPU kernels complete
- My Perfetto trace is too big, can I decrease it?
 - Yes, with v1.7.3 and later declare OMNITRACE_PERFETTO_ANNOTATIONS to false.

Summary

- OmniTrace is a powerful tool to understand CPU + GPU activity
 - Ideal for an initial look at how an application runs
- Leverages several other tools and combines their data into a comprehensive output file
 - Some tools used are AMD uProf, rocprof, rocm-smi, roctracer, perf, etc.
- Easy to visualize traces in Perfetto
- Includes several features:
 - Dynamic Instrumentation either at Runtime or using Binary Rewrite
 - Statistical Sampling for call-stack info
 - Process sampling, monitoring of system metrics during application run
 - Causal Profiling
 - Critical Path Tracing
